

PROSPER AWUNI

Senior Cyber Security Engineer | Threat Hunting | Detection Engineering | MITRE ATT&CK | SIEM/EDR

United Kingdom (Hybrid/Remote) | +44 7403 190750 | prosper.awuni@gmail.com | linkedin.com/in/awuniprosper

PROFESSIONAL PROFILE

I am a Senior Cyber Security Engineer with more than five years of experience in proactive threat hunting, detection engineering, and security operations across complex enterprise environments. I have a proven background in identifying threat actors that have evaded traditional security defences by applying deep understanding of attacker Tactics, Techniques and Procedures (TTPs), the MITRE ATT&CK Framework, and the cyber kill chain. I conduct structured threat hunts using Security Information and Event Management (SIEM), Endpoint Detection and Response (EDR), and identity platforms, analysing large datasets to uncover hidden threats and persistence mechanisms across the estate. I have strong experience operating within Security Operations Centre (SOC) and incident response environments, and I have deployed CrowdStrike Falcon across a large enterprise, using it as the primary EDR and NG-SIEM platform for threat hunting and detection. I hold the Certified Information Systems Security Professional (CISSP) certification and bring an intelligence-led, hypothesis-driven approach to proactive threat hunting.

CORE SKILLS AND TECHNICAL STACK

- **Threat Hunting:** Hypothesis-driven threat hunting using MITRE ATT&CK Framework TTPs, cyber kill chain methodology, proactive identification of threat actors evading traditional defences
- **Detection Engineering:** SIEM detection rule authoring and tuning, alert logic development, false positive reduction, detection coverage mapping against MITRE ATT&CK
- **Security Information and Event Management (SIEM):** CrowdStrike Falcon NG-SIEM, Microsoft Sentinel with Kusto Query Language (KQL); large dataset analysis and correlation across multiple log sources
- **Endpoint Detection and Response (EDR):** CrowdStrike Falcon (Prevent, Insight, Discover, EDR), Microsoft Defender for Endpoint (MDE) - expert-level proficiency
- **Threat Intelligence:** Open-source and commercial intelligence sources, threat actor profiling, TTP mapping, intelligence integration into hunting hypotheses
- **Security Operations Centre (SOC) / Computer Security Incident Response Team (CIRT):** Alert triage, incident handling, escalation, forensic analysis, containment
- **Security Orchestration, Automation and Response (SOAR):** PowerShell-based playbook automation, automated alert enrichment and response
- **Identity Threat Detection:** Microsoft Defender for Identity (MDI), Microsoft Entra ID, lateral movement detection, identity-based attack hunting
- **Vulnerability Management:** Tenable.io, Pentera Breach and Attack Simulation (BAS), AppCheck, Nessus; control validation against real-world TTPs
- **Frameworks:** MITRE ATT&CK, NIST 800-61, NIST Cybersecurity Framework (CSF), CIS Controls, Cyber Essentials Plus

PROFESSIONAL EXPERIENCE

University of the Arts, London (UAL) - Senior Cyber Security Analyst / Engineer *March 2025 - Present*

- Conduct structured, hypothesis-driven threat hunting campaigns using CrowdStrike Falcon NG-SIEM and Microsoft Sentinel, proactively searching for threat actors that have evaded traditional security defences by applying MITRE ATT&CK framework-mapped TTPs and cyber kill chain methodology.
- Analyse large datasets across Security Information and Event Management (SIEM), Endpoint Detection and Response (EDR), identity, and network log sources to uncover hidden threats, persistence mechanisms, and lateral movement patterns not surfaced by automated alerting.
- Lead detection engineering activities, authoring and continuously improving detection rules in Microsoft Sentinel using Kusto Query Language (KQL) and CrowdStrike Falcon NG-SIEM, mapping detection coverage to MITRE ATT&CK and identifying and closing coverage gaps.

- Operate CrowdStrike Falcon EDR platform at an expert level, using Falcon Insight for advanced threat hunting, Falcon Discover for asset visibility, and real-time response capabilities to investigate and contain confirmed threats.
- Use Pentera Breach and Attack Simulation (BAS) to continuously validate detection coverage against real-world attack techniques, feeding results directly into the threat hunting programme and detection engineering backlog.
- Manage Security Orchestration, Automation and Response (SOAR) playbooks using PowerShell, automating alert enrichment with threat intelligence and accelerating containment actions for confirmed threats.
- Gather and apply threat intelligence from commercial and open-source sources to prioritise threat hunting hypotheses, profile threat actors relevant to the organisation, and strengthen proactive defence posture.
- Manage Microsoft Defender for Identity (MDI) alerts and conduct identity-focused threat hunts, identifying credential theft, Kerberoasting, pass-the-hash, and lateral movement techniques across the identity environment.
- Produce threat hunting reports and detection engineering artefacts, communicating hunt findings, detection gaps, and remediation recommendations to security leadership.

University of the Arts, London (UAL) - Cyber Security Analyst, Cyber Security and Identity

March 2022 - March 2025

- Performed threat hunting exercises using MITRE ATT&CK-mapped hypotheses across SIEM, EDR, and identity platforms, proactively identifying attacker activity including lateral movement, persistence, and data access patterns not detected by automated alerting.
- Deployed Microsoft Defender for Endpoint (MDE), Microsoft Defender for Identity (MDI), and Microsoft 365 Defender across 8,000 users, enabling centralised endpoint and identity-based threat detection and expanding the threat hunting data surface available to the team.
- Contributed to detection engineering, developing and tuning SIEM and EDR detection logic to improve coverage against MITRE ATT&CK techniques relevant to the organisation's threat landscape.
- Triaged and investigated Security Information and Event Management (SIEM) and Endpoint Detection and Response (EDR) alerts, conducting root cause analysis and documenting incident timelines in line with NIST 800-61 incident response standards.
- Operated within the Computer Security Incident Response Team (CIRT) function, participating in incident handling duties including evidence preservation, forensic analysis, containment, and recovery.
- Managed vulnerability management programme using Nessus and AppCheck, correlating vulnerability findings with threat intelligence and MITRE ATT&CK to prioritise remediation of highest-risk exposures.
- Developed PowerShell automation scripts to streamline SOC and threat hunting workflows, including automated indicator-of-compromise (IOC) lookups, alert enrichment, and hunt hypothesis documentation.

HICX Solutions Ltd (SaaS/FinTech) - IT Engineer: Security, Quality and Infrastructure

February 2021 - March 2022

- Monitored security alerts across a cloud-hosted SaaS environment, conducting alert triage, initial threat analysis, and escalation through a structured incident response process.
- Managed endpoint security tooling and investigated anomalous endpoint behaviour, applying understanding of attacker TTPs to identify and respond to potential threats within the environment.
- Administered Microsoft Azure security controls, including logging, audit trail configuration, and access policy enforcement, expanding security visibility and supporting threat detection capability.
- Managed vulnerability scanning and patch management, prioritising remediation of critical vulnerabilities based on exploitability and relevance to known threat actor TTPs.
- Supported incident response activities and post-incident reviews, contributing to continuous improvement of the organisation's threat detection and response capability.

KEY ACHIEVEMENTS

- Delivered multiple structured threat hunting campaigns using MITRE ATT&CK framework-mapped hypotheses, uncovering attacker activity not detected by automated alerting and enabling proactive containment of threats within the organisation.

- Deployed Pentera Breach and Attack Simulation (BAS) programme to continuously validate detection coverage against real-world attack techniques, directly informing and improving the threat hunting programme and closing critical MITRE ATT&CK detection gaps.
- Led deployment of Microsoft Defender for Endpoint (MDE), Microsoft Defender for Identity (MDI), and Microsoft 365 Defender to 8,000 users, significantly expanding the data sources available for threat hunting and detection engineering.
- Designed and maintained a detection rule library in Microsoft Sentinel using Kusto Query Language (KQL), mapping coverage to MITRE ATT&CK and systematically reducing detection blind spots across high-priority attack techniques.
- Implemented Security Orchestration, Automation and Response (SOAR) playbooks using PowerShell, automating alert enrichment with threat intelligence and reducing mean time to triage (MTTT) for high-priority alerts by 40%.
- Achieved and maintained Cyber Essentials Plus certification, demonstrating robust security controls across endpoint, identity, and network domains through technical assurance and structured remediation activities.

EDUCATION

- M.Sc. Environmental and Resource Engineering
- B.Sc. Chemical Engineering

CERTIFICATIONS

- Certified Information Systems Security Professional (CISSP)
 - CompTIA Security+
 - Microsoft Certified Solutions Associate (MCSA)
 - CompTIA A+
 - Google IT Support Professional Certificate
